

Biognos

Biognos AB is a company specialized in computational drug design. Biognos provides services in virtual screening (ligand-based and structure-based) and also structure-based lead optimization. We are offering these services primarily to pharmaceutical and biotech companies which do not have sufficient in-house modelling facilities. We also provide the services to academic groups working e.g. in the field of chemical biology. Biognos also works on some in-house projects in collaboration with academic research groups.
